BEST ON

laptop or tablet

Thanks for helping us test the QC review side of our project platform. For the next three days, play the Construction Manager: subcontractors file daily field reports, and your job is to review each piece of work, verify it with your own photo, and approve or reject it. Approved work drives the project schedule. You also file your own CM daily log. We want to know anything that is confusing, wrong, or slower than it should be.

Before you start

Open `https://pm-platform-nine.vercel.app`

Email `cm-demo@ahc.test`

Password `CMdemo2026!`

Project Use **Test Project - Cash Flow** for everything.

On the sign-in screen, click "**Sign in with a password instead.**" There are already a couple of submitted example reports waiting, so you can start reviewing on day 1. Please change the password after the test.

What you are testing: the review loop

Subs file reports; each report has one or more pins on the site plan. You open each pin, check the sub's photo and reported progress, add your own verification photo, and approve or reject. Here is the full walk-through.

1

Sign in and open the Review Board

Log in, open **Test Project - Cash Flow**, and go to the **Field Reports** tab. As the CM you get a **Review Board**: every report plotted on the site plan as a colored dot, plus a queue on the right.

● **Green** = approved ● **Amber** = pending your review ● **Red** = rejected (back with the sub)

Field Reports

One daily report per sub: the progress narrative plus work marked on the site map. The Construction Manager reviews each pin.

New Field Report

Review Board

Every field report across the project as a dot on the site map, color-coded by approval state. Green is approved, amber is pending review, red is rejected (waiting on the sub). Click a dot to open the report and review it.

0 Approved 1 Pending 0 Rejected

C2-01

Approved Pending Rejected

C2.01 Site Improvement Plan. Each dot is one field report; the number is how many work items it covers on this sheet.

Jul 21, 2026	Civil	Submitted	1 Submitted	Jul 21, 2026

The Review Board. Click an amber dot or a report in the queue to open and review it.

- 2

Open a pending report

Click a report. You will see the crew, man-hours, weather, safety flag, the work narrative, and every pin on the plan. Pending pins are amber. Click a work item in the **Subcontractor work** list to review it.

SUBCONTRACTOR WORK (1)

CIV-1.1 Civil earthwork - July

C2.01 Site Improvement Plan. Click a work item to review it.

A submitted report with one pending (amber) work pin. Review progress shows 0 of 1 approved.

3

Verify, then approve or reject

The panel shows exactly what approving will do - "**Approving applies: In Progress · 40% · 280 LF**" - plus the sub's submitted photo.

You must attach your own AHC verification photo before Approve turns on. This is intentional: no approval without your own proof. Add an optional note, then **Approve**.

To send work back, click **Reject** and give a reason. It returns to the sub as **Rejected** and does **not** move the schedule.

The screenshot shows a mobile application interface for reviewing and approving work. At the top, there's a header with "Documents" and a "Print / PDF" button. Below this, a section titled "SAFETY" displays "F, light wind" and "OK". A text box contains the note: "bar. Two loads of structural fill placed and compacted." Below this is a "Review progress" section showing "0 of 1 approved" and "1 pending". A section titled "SUBCONTRACTOR WORK (1)" lists "CIV-1.1 Civil earthwork - July" with a yellow dot. Below this, the details for "CIV-1.1 Civil earthwork - July" are shown, including a "Submitted" status, the work name, and the progress bar: "Approving applies: In Progress · 40% · 280 LF". A "SUBMITTED PHOTOS (1)" section shows a blue placeholder image. Below this is a section for "Your verification photo (required to approve)" with a dashed box containing the text "Add AHC verification photos (tap to choose or take a picture)". A "Note (optional)" text box is also present. At the bottom, there are "Approve" and "Reject" buttons.

Approve is disabled until you add a verification photo.

4

Confirm it drove the schedule

Open the **Schedule** tab and find the task you just approved. Its **% complete** and **installed quantity** should now match the approved report, sourced from the field report.

Approved progress flows onto the schedule automatically.

5

File your own CM daily log

Go to **My Daily Log** then **New CM Daily Log**. Record weather, site conditions, progress, safety, and optional photos. This is your independent record - it is separate from the sub review cycle.

The CM daily log is your own record, not part of the sub approval loop.

Your 3-day test plan

Review whatever the subs file, and deliberately exercise the tricky progress cases below. If the sub has not filed yet on a given day, review the pre-loaded example reports and ping them.

DAY	WHAT TO DO	WHAT WE ARE CHECKING
Day 1 Jul 21	Review a pending report end-to-end: approve one pin (with a verification photo) and reject a second pin with a reason. Confirm the approved value shows on the Schedule and the rejected one does not.	The core approve / reject loop works and the verification-photo gate holds.
Day 2 Jul 22	File your own CM daily log . Approve a report that includes equipment / deliveries / delays and confirm they read clearly. Open a report flagged with a safety incident or near miss - is it obvious on the board and in the report?	Supporting sections and safety flags are clear and reviewable.
Day 3 Jul 23	Run the progress-integrity checks in the box below. Use Print / PDF on a finished report. Skim the whole Review Board - do the dot colors and counts match reality?	The schedule always reflects the latest approved truth, and reporting/export works.

Please try to break it - progress integrity

These are the cases that matter most. The schedule must always hold the **latest-dated approved** value.

- Approve a report, then approve an **older-dated** report on the same task. The schedule must **not** drag backward to the older value.
- Approve a task, then approve a **later report that lowers** the % (a correction). The schedule **should** follow it down.
- **Reject** a pin and confirm the schedule does **not** move until something is approved.
- Try to **Approve without a verification photo** - it should stay blocked.
- Approve, then reopen the same report - is the state clearly "approved" and locked?

How to report anything you find

For each issue, capture enough that we can reproduce it. A screenshot helps a lot.

#	DATE / TIME	REPORT (DATE + SUB)	WHAT YOU DID	WHAT YOU EXPECTED	WHAT ACTUALLY HAPPENED
1					
2					
3					
4					
5					

On a Mac, Shift+Cmd+4 grabs a screenshot. Send your notes and screenshots to Phil at the end of each day.
